

CLUB CASINO

*Digital casino and poker games in live environments!
The perfect tool for brick-and-mortar casinos, card clubs,
Internet cafés, pubs...*

CLUB CASINO is a software solution that delivers digital casino and poker games in live environments. The system offers great flexibility and can be the perfect tool for brick-and-mortar casinos, card clubs, Internet cafés, pubs and similar establishments that wish to benefit from server-based gaming.

The software operates best on digital tables and touch-screen computers, but it runs on basically any PC. It can be operated from servers located on the premises, or be connected to remote servers over the Internet. The flexibility of the system allows for adjustments as necessary to comply with different legal frameworks.

Outstanding casino and poker software

Club Casino uses the latest casino game software developed by leading casino software developer Play'n GO. The games are customised for touch screens, and partners can choose from a comprehensive collection of slots, table games and video poker games. The software can be customised in terms of currency, language, graphics and sounds in order to serve any market or market segment that partners are targeting. When Club Casino is operated on digital tables the casino games can be supplemented with Connected Table's multi-player poker software, allowing casino and poker to be played from the same account and administered through the same back end.

Preinstalled touch screen computers

When Club Casino is installed, PCs with touch-screens become attractive gaming machines, while still able to function as regular PCs. If you purchase a Club Casino solution, Connected Table is happy to offer a cost-effective package that includes preinstalled computers with 20" touch-screens that are customised for optimal display of the casino games.
