

ElecKiosk™

ElecKiosk™ is a software system that integrates an on-screen keyboard and handles remote administration of the digital tables (or any PC connected to the Internet). Tasks that can be conducted remotely include software installations, new configurations and settings, allowing or disallowing certain websites, and customisation of a start menu.

Additional features that are very useful in public areas are the possibility to push advertisements to the screens and to allow surfing against payment. Updates can be uploaded to a large number of tables at the same time.

ElecKiosk™ must be installed on digital tables that operate ElecPoker™ or ElecDebit™ in order for the software to work properly.

ElecKiosk™ is recommended for all digital tables supplied by ConnectedTable and is also useful software for any public PC connected to the Internet.

Key features:

- Integrated keyboard for touchscreens
- Websites can be allowed or disallowed
- Internet access against a charge
- Certain websites can be accessed for free
- Update and manage software
- Update supporting components such as Java or Flash
- Manage content (update advertisements)
- Create groups and schedules for content
- Manage the graphical user interface (GUI)
- Remote troubleshooting
