ElecPoker™ is a software system for digital poker tables, designed to operate in highly secured casino environments. The system is account based and can be used as a stand alone system or integrated to the casinos current player account structure (SAS protocol). A cash-in and ticket-out system has been developed to reduce the cash handling administration and accounting. create a user friendly player interface and encourage long sessions of poker on professional live and Internet poker players during the development processd of ElecPoker™ is installed on local or Internet based servers that can be connected to any number of poker tables. The system includes administrative tools and a RFID card-based identification solution. The administrative tools are meant to be used by poker managers, technical staff or other casino floor staff in order to configure and administrate the tables and an also be used to generate useful reports.

The software is best operated on tables supplied by Connected Table but it is also possible to purchase a software license and operate the system on other compatible hardware.

The software supports Texas Hold'em and Omaha and both cash games and Sit & Go tournaments are available. ElecPoker™ has been launched successfully in several poker clubs.
